

# Himanshu Lade

## AI Product Developer | Applied AI Engineer | Full-Stack Product Engineering

Sydney, Australia | +61 434 069 483 | hl@himanshulade.com | himanshulade.com | linkedin.com/in/himanshu-lade | github.com/Sharv619

AI product developer building startup products end-to-end across Python, TypeScript, backend APIs, web/mobile interfaces and applied AI. Hands-on from architecture and data models through AI integration, UI, testing, security, deployment and reliability, with experience spanning production recovery, performance optimisation, RAG/vector retrieval, MCP integrations, CI/CD and AWS.

### EXPERIENCE

**AI Product Developer / Founder & CTO, Lade LLC** Jun 2026 - Present | Sydney

- Building Project Aegis, Lade LLC's Nifty 50 derivatives research and risk platform, with data-integrity controls before downstream analysis; implemented a thread-safe last-known-value cache and integrity gateway, validated by 30 Sprint Zero tests, and quarantined backtests after identifying 7 methodology defects.
- Configure and extend Hermes for local AI-assisted development by adding custom skills and connecting 24 MCP tools across five BackPocket service boundaries; integrate local models and remote tooling, then validate agent output against raw command and test results.

**AI in Residence, WSTI (Western Sydney Tech Innovators)** Jun 2026 - Jul 2026 | Sydney

- Built a Phase-1 proof of concept for semantic developer-to-project matching using FastAPI, Ollama and Pydantic, validating the technical approach before broader CRM integration.
- Contributed Next.js/TypeScript/PostgreSQL product features including CRUD tooling, WebSocket-fed updates and admin workflows.

**Founding Engineer / Principal Technical Lead (Contract), Ask Jay Services** May 2025 - Aug 2025 | Wollongong

- Recovered and hardened a compromised production environment by isolating the affected database cluster, restoring service on managed MongoDB Atlas, rotating credentials, restricting access and enabling managed backups.
- Removed a user-facing performance bottleneck and reduced page-load time from roughly 25 seconds to under 3 seconds; built marketplace/course-management features and a three-sided Flutter workflow.
- Built and deployed 700+ SEO-oriented landing pages; added Docker/GitHub Actions CI/CD plus security and documentation changes supporting the company's ISO compliance work.

**Web Developer Intern, Australian Computer Society** Sep 2023 - Feb 2024

- Built a full-stack Node.js/Express + MongoDB Atlas prototype for Hoodwatchers, a community-focused social-awareness SPA with member, campaign and donation flows; added Mongoose data models plus explicit database connection/error handling.
- Added account/API security and accessibility foundations including bcrypt password hashing, JWT utilities, create-account validation, responsive Bootstrap UI, image alt text and screen-reader labels.

### SELECTED ENGINEERING PROJECTS

**CodeFlow-Hook | Open-source developer tooling**

Built and published an AI-assisted pre-commit review CLI with deterministic analysis, repository context and local Ollama support; removed an undeployed graph-backend dependency from the critical path so reviews could run offline, be tested deterministically and fit local Git/CI workflows.

**Network Guardian AI | Google DeepMind Hackathon**

Built local-first DNS anomaly detection using Shannon entropy, Isolation Forest and local embeddings, with cold-start gating, bounded history, persisted state and failure alerts; designed the system so traffic metadata could remain on owned infrastructure.

**BackPocket OS | Hackathon finalist**

Built user-scoped RAG for tradie admin workflows using PostgreSQL/pgvector and Ollama embeddings; added scoped retrieval and Fernet-encrypted secrets so email, lead and quote context could stay separated and controlled.

### TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Dart, SQL  
Backend & Web: FastAPI, Node.js, Express, React, Next.js, Flutter, PostgreSQL, SQLite  
AI & Data: RAG, Ollama, MCP, pgvector, FAISS, ChromaDB, sentence-transformers, scikit-learn, Isolation Forest  
Platform & Cloud: AWS (EC2, S3, CloudFront, OIDC), Docker, GitHub Actions, CI/CD, Nginx, Cloudflare, Tailscale

### EDUCATION & CERTIFICATIONS

|                                                                  |      |
|------------------------------------------------------------------|------|
| Master of Computer Science, University of Wollongong             | 2023 |
| Bachelor of Engineering (Computer Technology), Nagpur University | 2020 |
| AI Certificate - WSTI (Western Sydney Tech Innovators)           | 2026 |
